DETAILED ACTION

1. This Office action is in response to Applicant's RCE/Amendment filed on 6/23/2003.

2. Claims 1-42 are pending.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-42 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Cerf et al. (U.S. Pat. No. 6,418,138) in view of Ogasawara (U.S. pat. No. 6,513,015).

As per claims 1, 3-6, 8-12, 15-28, 30-34 and 36-42 Cerf discloses a novel communication system/method that includes mobile units distributed within a wireless communication network which are connected to a packet switched network (a method for public wireless network access), the method comprising the steps of:

detecting the presence of a local Area Network (LAN) providing wireless network access to a global data network with at least one mobile device at a location (see., abstract, col 2, lines 35-45, col 4, lines 51-67, col 5, lines 45-56, figs 2-5);

Art Unit: 3621

requesting identification information from the at least one mobile device through a node of the LAN (see., abstract, , col 3, lines 12-34, the gateway or proxy server is capable of identifying information); sending user information from the at least one mobile device to the access node of the LAN, the user information including identification of the at least one mobile device and demographic information about a user of the at least one mobile device (see., abstract, col 2, lines 35-45, col 4, lines 51-67); sending the demographic information about the users of the at least one mobile device to an advertising server (see., abstract, col 3, lines 37-59, col 5, lines 45-56);

providing access to the global communication data network through a gateway of the LAN to the at least one mobile device in response to receiving the demographic information about the user of the at least one mobile device by the advertising server from the access node of the LAN (see., abstract, col 4, lines 51-67, col 5, lines 45-56);

accessing the global communication data network through a gateway of the LAN with the at least one mobile device (see., abstract, col 3, lines 11-27);

receiving commercial messages through the gateway from the advertising server, the commercial messages being selected based on the demographic information of the users (see., abstract, col 3, lines 11-27); and

sending the commercial messages to a display at the location for viewing by the users (see., abstract, col 1, lines 12-65, col 3, lines 37-59).

It is to be noted that Cerf fails to explicitly disclose the step of receiving the demographic information about the user of at least one mobile device. However, Ogasawara discloses an electronic shopping

Application/Control Number: 09/750,772 Page 4

Art Unit: 3621

that provides for customer recognition using wireless identification. A customer ID card is further useful in assisting each customer in making purchase transactions. The customer ID card is used in connection with a customer assistance which is able to develop and display various personalized assistance recommendations based on an analysis of demographic and mobile terminals (see., abstract wherein said customer's demographic profile, col 3, lines 50-67, col 4, lines 1-33, col 5, lines 17-37). Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the radio communication system of Cerf by including the limitation detailed above as taught by Ogasawara because such modification would provide the benefit of determining that a particular customer has made any purchases of items based upon the customer ID.

As per claims 2, 7, 13, 14, 29 and 35 Cerf discloses the claimed method, wherein the advertising server is managed by an advertising service (see., col 3, lines 37-59, col 5, lines 45-56).

CONCLUSION

5. Any inquiry concerning this communication from the examiner should be directed to Pierre Eddy Elisca at (703) 305-3987. The examiner can normally be reached on Tuesday to Friday from 6:30AM to 5:00PM.

If any attempt to reach the examiner by telephone is unsuccessful, the examiner's supervisor, James Trammell can be reached on (703) 305-9768.

Any response to this action should be mailed to:
